

Roman Prigodskii

Final year at Letovo School, Moscow. Grade 10 winner of the Moscow Olympiad in Economics and two-time national finalist in the All-Russian Olympiad in Economics. Built Vertex MMA, a UFC forecasting platform graded against a bookmaker's closing line; sole author of two papers on its evaluation, one accepted at two NeurIPS 2026 workshops.

Education

Grade 11	Letovo School, Moscow Final year. Russian national curriculum, advanced (profile) mathematics track; MYP in the middle-school years. SAT Mathematics 790 (August 2026). IELTS 7.0.	Graduating 2027
----------	--	-----------------

Honours

1st place	Moscow Olympiad in Economics, Grade 10 division Level II on the federal list of olympiads; the 2026 final was held at twelve venues across Russia.	2025/26
Finalist ×2	All-Russian Olympiad in Economics, national final, Grades 9 and 10 One of 91 Grade 9 finalists in 2025 and of 118 Grade 10 finalists in 2026. In 2024/25 more than 470,000 students entered, most in the open school round, and 392 reached the final in Grades 9 to 11.	2025, 2026
Prize-winner	Russian Presidential Academy (RANEPA) Olympiad in Economics, final stage Grade 10; Level III on the federal list of olympiads. In Grade 9, prize-winner at the qualifying stage (2024/25).	2025, 2026
Commendation	International Mathematical Modeling Challenge (IM²C), Russian national round 7th of 20 teams, in Letovo's team Elbrus.	2026
Prize-winner ×2	Mathematics olympiads, regional stage, Grades 8 and 9 The All-Russian Olympiad in Mathematics in Grade 9, and the Euler Olympiad, its Grade 8 counterpart.	2024, 2025
3rd degree	All-Siberian Open Olympiad in Mathematics, Grade 7	2022/23
School award	Letovo School, best MYP personal project in Mathematics “Collatz conjecture”, written in English in Grade 9 with supervisor Kirill Kusakin and published in <i>Young Scientist</i> , No. 2 (87), 2025: the residues modulo 4 and 3 that a smallest counterexample would have to fall in.	March 2025

Research

prigodskii.dev/research

Accepted	Testing by betting when the bets are real: an e-value audit of 84 pre-registered hypotheses about a deployed forecaster Sole author. Accepted as a poster at two NeurIPS 2026 workshops, both non-archival: New in ML, and in a shorter version, E-Values: From Statistics to ML. - Real bets: a deployed UFC forecaster against a bookmaker's posted prices, over 4,141 walk-forward bouts. - The 84 slices overlap, so Benjamini-Hochberg's guarantee is not established; its four discoveries survive neither Benjamini-Yekutieli nor e-BH. - Checked on 40,000 null replications (expected e-value 0.985 ± 0.018). The headline result is negative.	2026
Working paper	Measure the instrument first: detection floors for model selection and for LLM judges Sole author. Measures the smallest effect an evaluation could have detected, with a null lever: the same recipe refit under a new random seed, which changes nothing real. - Re-seeding alone reproduces 80% of the only change Vertex MMA's winner model ever shipped; the pipeline had 56% power against its own result. - Identical reruns of a deployed LLM classifier disagree on 5.6% of items: a floor of 2.9 agreement points.	2026

Concluded	Vertex Boxing: the Vertex MMA models moved to professional boxing Jul-Sep 2026
	Built on 413,279 professional bouts to test whether regional and club betting lines are soft enough to beat; where prices exist, they are not. Blended into the opening price, the model passed a test registered in public before its holdout model was trained, at $e = 41.8$ against a bar of 20 (January to July 2026). Backtests only, no real bets; a live test frozen in public on 24 September 2026 runs to 2029.

Projects and experience

Live product	Vertex MMA, vertexmma.com 2026–present
	A UFC analytics platform in English and Russian with a nine-model forecasting stack: a 118-feature winner ensemble over LightGBM, CatBoost and logistic regression, method and finish models, and a 10,000-run Monte Carlo simulator. AUC 0.7244 on 664 bouts held out from January 2025; graded against the bookmaker's closing line, which stays ahead, it is better calibrated and less sharp. 4,581 fighters and 8,906 bouts. Five mechanisms keep future information out of the features and bookmaker odds are never one; about two dozen rejected ideas are documented with their reasons.
Co-founder	Gluline, gluline.com 2026–present
	Co-founder of Apri Software L.L.C-FZ in the UAE; engineer and Head of AI for its messenger, released on the App Store on 19 August 2026, then on Google Play and the web, in ten languages. One repository: Android in Jetpack Compose, iOS in SwiftUI, a web client and a Python and FastAPI backend. Responsible for everything the product does with a model; the assistant stays off until the user turns it on. Released through a written checklist, with 309 unit tests and two formal codebase audits.
Internship	Alfa-Bank 2026
	Built Alfa-Romeo, a working concept of the bank of 2035: 93 iOS screens in SwiftUI on a NestJS and Postgres backend, live rates from the Bank of Russia and CoinGecko, and a Claude copilot that waits for a yes.
Client work	Zacks to Interactive Brokers execution pipeline 2026
	Paid work for a third party: each day's Zacks screen (4,369 stocks on one day) turned into an equal-weight book of 25 positions and the orders that close the gap at Interactive Brokers. A dry run so far.
Open source	indelible, github.com/romanprigodskii/indelible September 2026
	A Claude Code skill that runs self-study the way a strict tutor would: a plan built back from the learner's date, theory read and then closed, a cold recheck two days later, and every miss brought back after 1 day, 3 days, 1 week and 3 weeks. 17,743 lines of standard-library Python, 588 tests.
Open source	Clipwell, github.com/romanprigodskii/clipwell 2026
	A clipboard history for macOS and Windows, written natively twice (Swift and SwiftUI, C# and WPF) rather than once in Electron; MIT licensed, with no account and no network calls.
Delegate	SPIEF Junior, St Petersburg International Economic Forum June 2025
	One of the Letovo School delegation to the forum's programme for school students.

School projects

Grade 9	A sausage wrapped in newspaper December 2024
	Proved that a sausage wrapped in newspaper and cut at an angle unrolls into a sine wave, its period the circumference; on a real one, the traced edge follows a sine to within 1.8% of its height.
Grade 9	The volume of a tea glass Spring 2025
	Fitted the profile of a Turkish tea glass with four parabolas and summed thin discs in the limit with the formulas for sums of powers: 216.9 cm ³ , against 200 to 225 ml in a water test.

Skills

Statistics	E-values and test martingales, anytime-valid inference, walk-forward validation, calibration, power analysis
Modelling	Python, LightGBM, CatBoost, scikit-learn, NumPy, pandas, statsmodels, Monte Carlo simulation
Engineering	TypeScript, React, Next.js, Postgres; Swift, SwiftUI, Kotlin, Compose, C#; FastAPI, NestJS, Docker; LaTeX
Languages	Russian (native), English (working)
